E-BUSINESS · FINAL PROJECT

Pre-Launch a New Product Online

Group project brief for students

Group size	Up to 5 students. There are 5 roles: Leader, Research, Store, Content and Testing. Every role needs an owner, so one student can take more than one role if your group has less than 5 members.
Duration	4 weeks, with a checkpoint in class at the end of each week
Testers	8–10 real people from your target customers, plus at least 3 for a second test
Marks	100 marks: 80 for group work + 20 for each student (Q&A)
Submit	One zip file on the LMS: report, slides, Evidence Workbook and screenshots

1. The task

Your group will create a **new product or service** and a **brand** for it. You will not sell it. Instead, you will get it ready for an online launch: you build the store and the social media content, **test them with real customers**, fix the problems you find, and plan the launch.

In 4 weeks, your group will:

1. **Research:** talk to real customers and study competitors.
2. **Build:** make an online store and a social media page with content.
3. **Test:** ask 8–10 people from your target customers to use your store and give feedback on your content.
4. **Improve and plan:** fix the main problems, test again, and write a launch plan.

> **Important:** we mark how well you test and improve, not whether people like your product. Finding problems is a good result. A group that finds 5 problems and fixes them can get a higher mark than a group that reports "everything was perfect".

2. Rules

1. **Your product** must be new (your own idea), legal and safe. Not allowed: medicine, supplements, cosmetics, alcohol, tobacco, vapes, gambling, financial products, adult content, or copies of other brands.
2. **Your brand** must be your own: your own name, logo and design. Do not copy or look like a real brand.
3. **Be honest.** Show the line "Student project – E-Business, Hanoi University" on your store and your social page. Tell every tester that the product is a concept and will not be sold.
4. **No fake data.** Do not make up interviews, test results or screenshots. Do not buy followers, likes or reviews.
5. **No payments.** Your checkout must run in test mode only. Posting in public is optional; paid ads are not allowed.
6. **Protect testers.** Ask for permission before you test or record a screen. Do not write testers' names; use codes (T1, T2 ...). Do not collect phone numbers or emails.

7. **Real testers only.** Testers must be from your target customers. Group members and classmates in this course do not count.

> The teacher must approve your product idea before you build or test. If you break rules 3–6, your project mark is capped at 50/100.

3. Timeline

Week	What you do	Checkpoint (in class)
1. Research	Choose your product idea and create your brand. Interview at least 5 possible customers. Study 3 competitors.	Teacher approves your idea
2. Build	Build your online store: products, prices, photos, cart, test checkout and policies (delivery, returns, privacy). Set up one social media page and prepare 7 posts (they can stay as drafts). Make 2–3 versions of one key post, for example with a different image or headline. Write your test plan: the tasks and questions for your testers.	Store and page are ready; test plan checked
3. Test	Test with 8–10 people from your target customers (in person or by video call). **Store test:** each tester tries to find a product and make a test order. Record if they finish, how long it takes and where they have problems. **Content test:** each tester rates your post versions and chooses the best one. Write the results in the Evidence Workbook on the same day.	Tests finished; main problems listed
4. Improve and plan	Fix the main problems. Take screenshots before and after. Test again with at least 3 people to check your fixes. Write your launch plan, the report and the slides. Present.	Presentation and Q&A

4. What to submit

One member submits one zip file on the LMS, named **Class_GroupNumber.zip** (for example 1C15_Group1.zip). It contains 4 items:

Item	Format	Notes
Report	PDF, max. 10 pages	Use the 9 headings in the table below. Put your store link and social page link on the first page.
Slides	PDF, max. 10 slides	For your 10-minute presentation
Evidence Workbook	Excel	Use the teacher's template. It has 7 sheets: Interviews, Competitors, Store Test, Content Test, Fixes, Results, AI Log.
Screenshots	Folder of images	Name them S1, S2, S3 …

Report: headings and what to write

Use these 9 headings, in this order. The page numbers are only a guide; the whole report is max. 10 pages.

Heading	What to write	Pages
1. Team and roles	Name, student ID and role(s) of each member. One line on what each person did.	0.5
2. Product, brand and customer	What your product or service is and what problem it solves. Your brand name and logo, and why you chose them. Your target customer: who they are, where they live, their habits. Your price, main costs and how the business would make money.	1
3. Customer research	Who you interviewed and how. 3–4 main findings, with codes. A table that compares the 3 competitors (platform, price, strengths, weaknesses). What you learned and how it changed your idea.	1.5
4. Online store	The platform you used and why. Screenshots of the main pages: home, product, cart and checkout. Key features and policies (delivery, returns, privacy).	1.5
5. Social media content	Your channel and why it suits your customer. A table of your 7 posts: topic, format and goal. The 2–3 versions you tested and how they are different.	1
6. Testing and results	Who your testers were and how you tested (tasks and questions). Store test: how many finished the order, average time, average ease score, main problems. Content test: average score of each version, the best version and why. The limits of your test, for example a small number of testers.	2
7. Improvements	The 3–5 main problems and how many testers had each one. What you changed, with before and after screenshots. The results of your second test: did the fixes work?	1
8. Launch plan	Is your product ready to launch? What still needs work? Your launch channels, a 4-week launch timeline and a small budget. 3 targets for the launch with numbers, and where the numbers come from (for example a published industry report).	1
9. How we used AI	Which AI tools you used and for which tasks. 2–3 examples from your AI Log that show how you checked the AI work, including one AI mistake you found.	0.5

Evidence codes

Every row in the Evidence Workbook has a code: **I** for interviews, **C** for competitors, **T** for the store test, **P** for the content (post) test, **F** for fixes, **R** for results, **A** for the AI Log and **S** for screenshots.

When you write a fact or a number in your report, add its code in brackets. A fact without a code counts as unsupported.

> **Example:** "6 of 9 testers could not find the delivery fee before checkout (T2, T3, T5, T6, T8, T9; S12)."

5. Using AI

You can use AI in every part of this project: writing posts, making images, building your store, analysing test results or checking your English. But you are responsible for everything you submit.

Check AI work before you use it

- **Facts** → find the original source.
- **Numbers** → calculate them again yourself.
- **Store features** → test them and take a screenshot.
- **Posts** → make sure they are honest and follow the rules.

Record it. Write each important AI use in the AI Log: what you asked, what you used, what you changed and how you checked it. You do not need to record grammar or spelling checks.

> **Never use AI to create fake evidence**, such as fake interviews, fake test results or fake screenshots. This is cheating, and that part of your project gets 0. You may practise with an AI "customer" before your real tests, but AI testers do not count as testers.

The teacher uses AI to help check submissions against the marking guide. The teacher makes all final marks.

6. Marking guide

The project is worth 100 marks: 80 for group work and 20 for each student. Each part gets one level: **Excellent** (100% of its marks), **Good** (75%), **Fair** (50%) or **Weak** (25%). A missing part gets 0.

Part	Marks	Excellent looks like	Common reasons to lose marks
A. Idea and research	15	Clear product, customer and way to make money. 5+ real interviews with useful findings. 3 competitors with real data (price, sales, reviews). The idea changes based on research.	Interviews with friends or classmates; research copied from the internet or AI
B. Online store	15	Store is online with full product information and photos. Cart and test checkout work. Clear policies. Works well on mobile. Shows the student project line.	Broken checkout; placeholder text; missing policies; not online
C. Social media content	10	Page set up with brand profile. 7 posts that fit the customer. 2–3 test versions that differ in one clear way.	Generic posts; test versions that are almost the same
D. Testing and results	20	8–10 real testers from the target group. Clear tasks and questions. Results recorded on the day. Numbers calculated correctly. Problems listed with how many testers had them.	Fewer than 8 testers; testers outside the target group; numbers that do not match the workbook
E. Improvements and launch plan	15	Main problems fixed, with before and after screenshots. Second test shows if the fixes worked. Launch plan is realistic, with targets based on sources.	Fixes with no evidence; no second test; targets with no source
F. AI use	5	AI Log is complete. At least 3 examples show how you checked AI work, including one AI mistake you found and fixed.	No AI Log; "we checked it" with no detail
G. Presentation and Q&A (individual)	20	See "Individual mark" below.	See "Individual mark" below.

Individual mark (Part G, 20 marks)

Presentation day (about 20 minutes per group). Your group presents for 10 minutes, and **each member presents their own part** (about 2 minutes). Then the teacher asks each student 2 questions:

- **Question 1 – evidence:** about one piece of evidence that you made. Example: "Open the Store Test sheet. Show me row T4 and explain why you wrote that the tester had a problem."
- **Question 2 – reasoning:** a "why" or "what if" question, or a question about one of your rows in the AI Log.

You must answer yourself. You cannot change the question or ask a group member to answer. Bring a laptop with your store, your Evidence Workbook and your screenshots open.

Criterion	Marks	Excellent looks like	Weak looks like
1. Presenting your own part	5	Clear, on time, matches your role and your evidence	Reads the slides; talks only about the group in general
2. Knowing your evidence	8	Opens the workbook, finds the right source and can calculate one number again on the spot	Cannot find the evidence for the work you did
3. Reasoning and judgement	7	Explains "why" and "what if"; describes one time you checked or fixed AI work	Memorised answers; cannot explain your decisions

Each criterion uses the same 4 levels as above (Excellent 100%, Good 75%, Fair 50%, Weak 25%).

- **Absence:** if you miss the presentation without an accepted reason, your individual mark is 0/20.
